Project Title:

Smart Digital Health Passport for Citizens Using Secure Health Data Management

Batch No: 11

Abstract:

This project aims to develop a secure and centralized health record management system where citizens can store their medical information such as personal health details, prescriptions, allergies, vaccination records, and medical history. Doctors or authorized healthcare providers can access these records with proper authentication to provide better and faster treatment. The platform enables citizens to view and manage their health data, while authorized healthcare providers can access relevant information with user consent. Key features include digital storage of medical history, vaccination certificates, laboratory reports, emergency health information, and appointment records. The system allows users to register and create a digital health profile containing essential medical information such as blood group, allergies, chronic diseases, and emergency contacts. Citizens can upload and organize their medical records, track vaccination history, and receive reminders for medications and health checkups. The platform also provides an emergency health access feature, which enables quick viewing of critical medical details during emergencies, helping healthcare providers make faster decisions.

Objectives:

1. To allow citizens to manage and update their health information easily.
2. To enable easy and secure access to health information for authorized healthcare providers in order to improve medical decision-making and patient care.
3. To provide digital verification and sharing of health data such as vaccination records, medical history, and diagnostic reports to support efficient healthcare services and emergency situations.

Modules:

Module 1: User Registration Module:
Purpose : Allows citizens to create an account and securely to the system.

Features

• Register with name, email, password

• Login securely

• Manage personal profile

Module 2: Health Profile Module:

Purpose: Stores basic health information such as blood group, allergies, and medical conditions.

Features:

• Add personal health details (age, blood group, allergies)

• Update health profile information

• View health profile data

• Store emergency contact details

Module 3: Medical Records Module:

Purpose: : Allows users to add,update and view medical records,prescriptions and treatment history.

Features:

• Add medical reports

• Upload prescriptions

• View past treatments

• Track health history

Module 4: Doctor Access Module:

Purpose: Allows doctors to view patient records and update treatment details with permission.

Features:

• View patient medical data

• Add diagnosis

• Update treatment details

Module 5: Admin Module:

Purpose: The admin manages user accounts,supervises system activities and maintains the database to ensure proper functioning.

Features:

• Manage users

• Monitor system data

• Maintain security

Module 6: Emergency Health Access

Purpose: Provide quick access to critical health information.

Features:

• Emergency health card

• Blood group display

Conclusion:

A Health Passport for citizens is an innovative step toward improving public healthcare management and accessibility. By securely storing an individual's medical history, vaccination records, prescriptions, and test results in one place, it enables faster, safer, and more efficient healthcare services. It empowers citizens to take control of their health while helping healthcare providers make better-informed decisions.
